List of Changes:

1. **Encouraging Speech bubbles upon completion of tasks**
   a. I added a dynamic speech bubble encouragement system that enhances user feedback and motivation within the Nara extension. Now, when a user completes a task by checking it off, a cheerful speech bubble appears near the on-screen deer character, delivering a randomly selected positive message such as "Great job!" or "You're making progress!"
   b. This subtle, animated bubble floats into view and fades out automatically, creating a lighthearted and rewarding moment that reinforces the user's accomplishment.
   c. The bubble is positioned using the deer's bounding box to maintain visual consistency and charm, further aligning with Nara's calming and supportive aesthetic.

2. **Mood Selection Prompt**
   a. I implemented a new Mood Selection Prompt feature that allows users to quickly log their emotional state each day using expressive emoji buttons.
   b. This mood selector is subtly placed in the bottom-left corner of the screen and designed with a soft, translucent interface that matches Nara's calming aesthetic.
   c. When a user selects a mood, it is saved locally using chrome.storage.local with the current date, allowing for potential mood tracking or personalized experiences in the future.
   d. Visual feedback is provided by highlighting the selected emoji, offering users a simple yet meaningful way to reflect on their feelings. This addition aligns with Nara's focus on mental wellness by encouraging self-awareness in a low-pressure, delightful way.
